ROOFTOP UNITS

WRX-Y

AIR COOLED ROOFTOP UNITS,
FROM 50 TO 240 kW,
FROM 10000 TO 45000 m³/h

WRX-Y

**ENGINEERED FOR
MAXIMUM EFFICIENCY
AND VERSATILITY**

**REVERSIBLE AIR COOLED ROOFTOP UNIT.
COOLING POWER FROM 50 TO 240 kW.**

WRX-Y is an autonomous and reversible rooftop unit dedicated to the air handling and air renewal in large volume areas. All models come with a double cooling circuit, scroll compressors, R410A refrigerant, and EC plug fans.

The high flexibility in choosing the airflow direction, as well as the possibility to customize the units with four types of heat recovery and different air handling sections, make WRX-Y an extremely versatile unit, which can easily fit in every type of application.

IDEAL APPLICATIONS:

- ▶ Warehouses
- ▶ Automotive industry
- ▶ Electrical equipment cooling
- ▶ Plastic industry

FUNCTIONS:

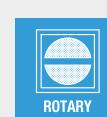

- | | |
|-------------|--|
| AR | Air Recirculation (Baseline) |
| MF | Air mixing and free cooling |
| AX | Air mixing and axial fan extraction |
| HR-F | Heat recovery with thermodynamic effect |
| HR-B | Heat recovery with Refrigerant Booster |
| HR-P | Heat recovery with cross-flow heat exchanger (High and low flow) |
| HR-E | Heat recovery with rotary enthalpy wheel |

MAXIMUM ENERGY EFFICIENCY IN ALL APPLICATIONS

Available in seven different configurations and four different heat recovery technologies, WRX-Y has been engineered for maximum efficiency in any situation.

As standard, WRX-Y features plug fans with built-in EC motor, electronic thermostatic valves and the latest generation axial fans.

All units are designed to meet the seasonal efficiency standards (SEER & SCOP) established by the EU 2016/2281 regulation - First Tier (2018), some of them are already compliant with the Second Tier (2021).

Cooling capacity increase	% (1)	+3%	+12%	+10%	+45%
Thermal capacity increase	% (2)	+7%	+11%	+22%	+39%

1 ▶ Percentage values refer to WRX-Y/MF version (no heat recovery). Standard conditions for cooling: Outdoor 35°C 50% R.H. / Indoor 27°C 47% R.H. / Mix 50% - Nominal air flow.

2 ▶ Percentage values refer to WRX-Y/MF version (no heat recovery). Standard conditions for heating: Outdoor 7°C 87% R.H. / Indoor 20°C 50% R.H. / Mix 50% - Nominal air flow.

High flexibility in the airflow direction, top efficiency and total reliability combined with a rational and compact design.
This is the result of the new WRX-Y versatile range featuring seven operational types and four different heat recovery technologies.

► HIGHLY UNIT VERSATILITY

WRX-Y is a modular and configurable solution that has been wisely engineered to fit precise size requirements.

WRX-Y is available in both heat pump and cooling only versions, while the base module features seven different functions. Additionally, a wide range of accessories dedicated to the air handling range allow the unit to operate optimally in any condition.

► TOTAL SYSTEM RELIABILITY

WRX-Y manages additional resources for heating and air handling in a completely independent way. Thanks to its free cooling mode, the unit utilizes the favorable external conditions to condition the environment without switching on the compressors.

Units are always supplied with two independent cooling circuits.

► SPACE OPTIMIZATION

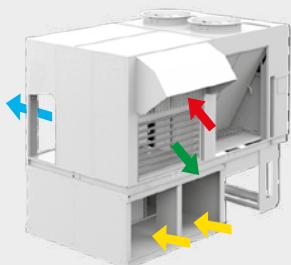

WRX-Y features a unique design to fit large applications as well as small / medium volume areas.

An accurate distribution of the various components (fans, coils, compressors) ensures a small footprint compared to a traditional unit developed lengthwise.

► REDUCED FOOTPRINT

► DESIGN FLEXIBILITY

WRX-Y ensures a free selection in the direction of both the supply and return airflows. A super flexible layout that simplifies installation and facilitates the replacement of pre-existing HVAC systems.

TECHNOLOGICAL CHOICES

Rational unit design, together with cutting-edge technological choices: these are the distinguishing traits of WRX-Y.

AIR3000TE CONTROL

The core of the WRX-Y management is the evolved AIR3000TE control, specifically designed for Climaveneta rooftop units.

Besides the cooling circuit management there is the air handling control, and both of these functions allow the WRX-Y unit to work in a completely autonomous way.

OUTDOOR FANS

New-generation axial fans with 3-D aerodynamic blades.

Each fan is equipped with a diffuser to recover the kinetic energy into static/pressure energy.

It has been designed to ensure a reduction in the number of rotational speeds which minimizes the absorbed power supply and noise level.

ELECTRONIC THERMOSTATIC VALVE

The electronic expansion valve, which comes as standard in all versions, provides great benefits with variable loads and varying external weather conditions.

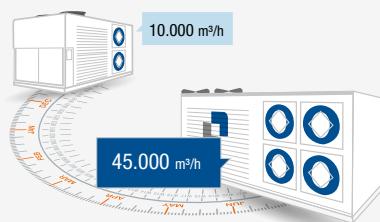

Its introduction is in line with the accurate design of the cooling circuit and its efficient operation in multiple operating conditions.

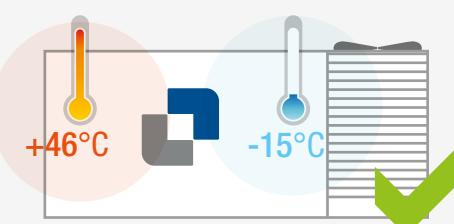

OPERATING RANGE AND LIMITS

The WRX-Y range consists of 13 sizes, from 50 to 240 kW of cooling capacity and airflow from 10000 to 45000 m³/h.

Thanks to the wide and generous dimensions of the treatment

coils, together with the smart design of the cooling circuit, WRX-Y units also boast an extended outdoor temperature operating range: from -15°C when the unit is working in heat pump operation, to +46°C in cooling mode.

Because the excellence of a product, according to Climaveneta brand philosophy, starts with the best quality of each single technical component, in both the design and installation phases.

CASING

The units have been designed with a self-supporting structure made from suitably thick hot galvanized steel sections.

The external panelling is painted with polyester powder coat whereas the air treatment section is insulated using specific high performing adhesives.

As an option, the air handling section can be made of aluminium load-bearing frame and sandwich panels.

EC PLUG FANS

The WRX-Y units are equipped with radial plug fans with an EC incorporated motor.

The fan speed can be regulated by keeping both the airflow or the external static pressure constant or by selecting the variable airflow through the Vair function.

ACCESSORIES

A wide range of accessories completes the air treatment and allows the unit to optimally manage its operation.

Control function for the air handling section

Air quality control with CO₂ probes

High efficiency filters (up to ePM01 70% - F7) in addition to the standard class isocoarse 50% (G4) filters

BMS connection

Heating and pre-heating coils, electrical heater, hot gas coil

Axial EC fan, to enhance unit efficency

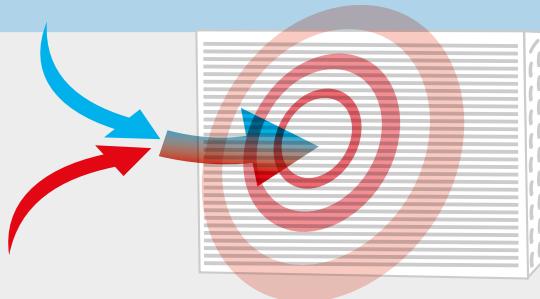

WRX-Y

HEAT RECOVERY TECHNOLOGIES

HR-F**THERMODYNAMIC HEAT RECOVERY**

Thermodynamic heat transfer is achieved by deviating the exhaust air through the outdoor section of the refrigerant circuit.

This increases efficiency by allowing the unit to work at a more advantageous condensing temperature than allowed by the outside conditions.

kW/h

Smart and functional design

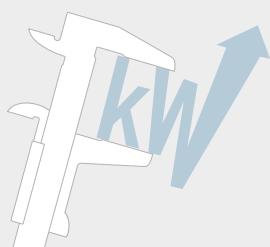

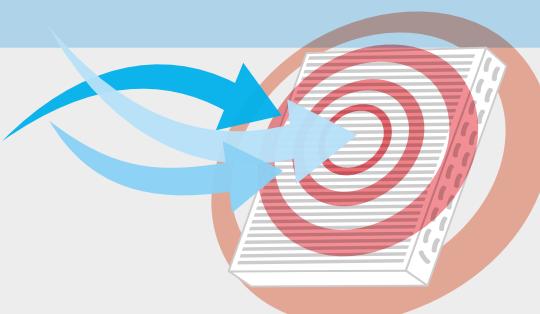

Advantageous average temperature on the outdoor coil

No additional pressure drops

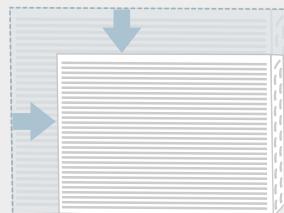

HR-B**REFRIGERANT BOOSTER**

The WRX-Y HR-B units are fitted with the exclusive Refrigerant Booster heat recovery system, which promptly and fully recovers heat from the exhaust air.

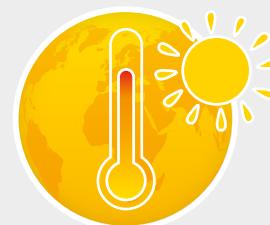

This recovered energy is transferred to the refrigerant circuit, which increases the capacity of the air handling coil while reducing the power absorbed by the compressor. The recovery system, made of a finned coil installed at the air exhaust damper, takes advantage of the favourable conditions of the exhaust air, both during summer and winter operation.

Quantifiable benefits

Compact footprint of the recovery system

Ideal for Mediterranean climate

Four heat recovery technologies designed to precisely and reliably transfer the energy contained in the exhaust air to the refrigerant circuit, thus increasing the unit's overall efficiency.

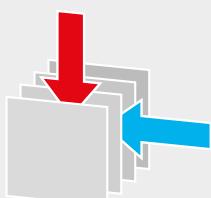

HR-P

CROSS-FLOW HEAT RECOVERY

The WRX-Y HR-P units feature the cross-flow heat recovery, which transfers the thermal energy contained in the exhaust air to the fresh airflow.

The plate heat recovery system extends the operating limits of the unit, allowing it to work with higher flow rates of external air.

The units are equipped with by-pass dampers for free-cooling operation, to reduce system pressure drops.

Complete airflow separation

High operating reliability and safety

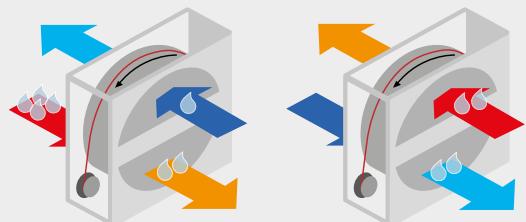

Quick and easy cleaning and maintenance

HR-E

RECOVERY OF ENTHALPY ROTARY HEAT

The most efficient heat recovery technology in terms of efficiency is the rotary enthalpic recovery, which provides performance values from 60% to 90% higher than traditional solutions.

The key component is the enthalpic wheel which is made with alternately flat and wavy sheets treated by hygroscopic coating. Due to the large exchange surface compared to its volume, it ensures the recovery of latent and sensible heat, with a significant increase in the unit overall capacity.

Latent heat recovery

Cooling capacity recovered

Quick return on the investment

WRX-Y FUNCTIONS

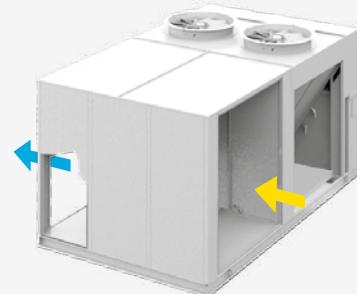

WRX-Y is available in 7 configurations to easily fit modern HVAC design

AR Function

Unit function for the total recovery. Ideal in those applications where the air renewal and the exhaust air extraction are not managed by the rooftop unit.

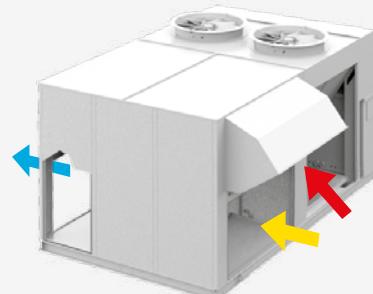

This unit perfectly substitutes old products in pre-existing HVAC plants which already have a system dedicated to air renewal.

MF Function

The MF function allows the recirculated ambient air to be mixed with some fresh outside air. Free cooling operation is managed by the controller, which automatically opens the dampers according to the indoor and outdoor temperatures, and the set point.

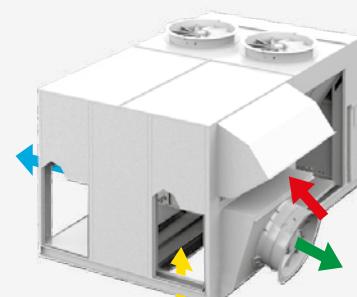

This function is ideal in refurbished buildings with low air tightening, to be coupled with already existing air extraction systems which need to be used to balance pressure inside the building.

AX Function

As the MF function, the AX function allows the unit to mix the recirculated ambient air with some fresh outdoor air. The unit is equipped with one or more axial fans in order to ensure exhaust air rejection.

Thanks to these fans, AX is ideal in all commercial applications, such as gas stations where a compact and autonomous solution is required. Expulsion fans module is delivered in a separate package to simplify transport.

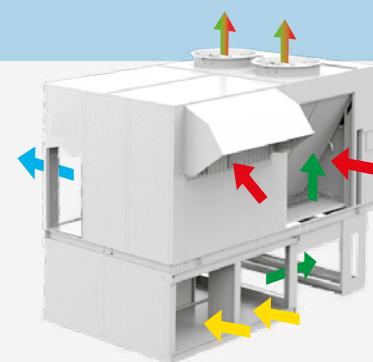

HR-F Function

Unit with three dampers for unit operation in different modes: 100% recirculated air, air mixing, free cooling, air extraction/expulsion.

Exhaust air is forced through the expulsion damper to the external coils, in order to enhance overall unit performance:

this thermodynamic effect is totally free, without the need of further heat exchangers.

Return fans module is delivered in a separate package to simplify transport.

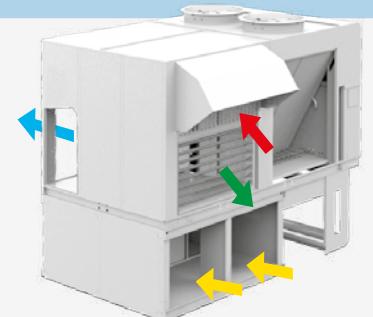

HR-B Function

Unit with three motorized dampers and Refrigerant Booster heat recovery. The unit ensures the treatment, renovation, and air extraction in a completely autonomous way. At the same time, the HR-B function rejects excess air and ensures free cooling mode.

Thanks to the Refrigerant Booster recovery, the WRX-Y HR-B unit promptly and fully recovers the thermal heat of the exhaust air, transferring this energy to the cooling circuit which increases its capacity.

Return fans module is delivered in a separate package to simplify transport.

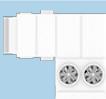

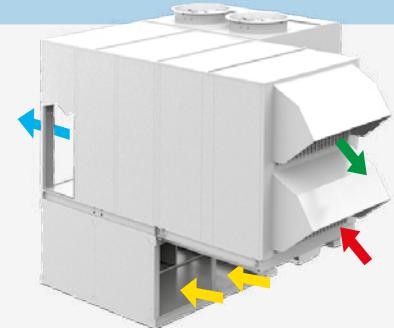

HR-P Low Flow and High Flow Function

The HR-P function is the ideal solution for an extreme climate with very hot, or alternatively, very cold conditions. Thanks to the cross-flow heat recovery the unit transfers the thermal energy contained in the exhaust air to the fresh air. The unit is equipped with three motorized dampers for the unit operation in total recirculated mode, free cooling, air extraction, and air expulsion.

During free cooling operation, exhaust air bypasses the plate heat exchanger and it is transferred towards the external coils, thus ensuring the thermodynamic heat recovery. There are two PHE available: low flow, whenever a little fresh air is required, while high flow is recommended when a lot of fresh air is required.

Return fans and heat recovery modules are delivered in separate packages to simplify transport.

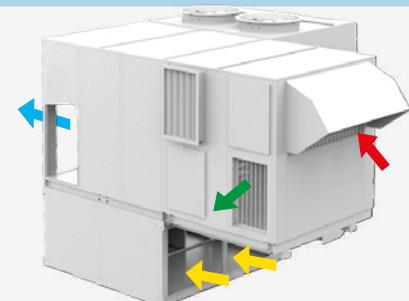

HR-E Function

The HR-E function employs the enthalpy heat recovery to exchange latent and sensible heat between the fresh outside air and exhaust air. The unit is equipped with three modulating dampers for the operation at 100% recirculation, air mixing, free cooling, and air extraction/expulsion.

In free cooling mode, the exhaust air bypasses the recovery system thus reducing pressure losses.

Return fans and heat recovery modules are delivered in separate packages to simplify transport.

Notes:

- 1 ► Cooling: Outdoor 35°C 50% R.H. / Indoor 27°C 47% R.H. / Mix 30%.
- 2 ► Heating: Outdoor 7°C 87% R.H. / Indoor 20°C 50% R.H. / Mix 30%.
- 3 ► ESP for standard configuration (optional accessories not included/calculated).
- 4 ► Sound power on the basis of measurements made in compliance with ISO 9614. For complete sound data consult Elca World.

- 5 ► The weight shown refers to the unit in the heat pump version, including any batteries and accessory filters. Any additional modules are not considered.
 - 6 ► The dimension does not include hoods and the thickness of the pre-filter for fresh air if present.
 - 7 ► The refrigerant charge is the result of a theoretical calculation and could be different from the actual amount of refrigerant which is charged in the unit and on the label
- The units highlighted in this publication contain HFC R410A [GWP₁₀₀ 2088] fluorinated greenhouse gases.

MORE THAN 1000 PROJECTS ALL OVER THE WORLD

VESCOVANA LOGISTICS Vescovana (PD) - Italy

Period: 2018

Application: Industrial Process

Plant type: Air to Air System

Cooling capacity: 945 kW

Heating capacity: 960 kW

Airflow: 175000 m³/h

Installed machines: 5 WRX 0604

Climaveneta's rooftop units, with their unbeatable advantages in terms of efficiency, quality, and precision are already the preferred choice of the major brands in the most prestigious projects all over the world.

**L'ALGÉRIENNE DES INDUSTRIES
TEXTILES (TAYAL)**
Relizane - Algeria

Period: 2018

Application: Industrial Process

Plant type: Air to Air System

Cooling capacity: 4613 kW

Heating capacity: 4479 kW

Installed machines: 20x WRX 0484, 7x WRX 0704

for a greener tomorrow

Eco Changes is the Mitsubishi Electric Group's environmental statement, and expresses the Group's stance on environmental management. Through a wide range of businesses, we are helping contribute to the realization of a sustainable society.
